
Vision Statement

Our vision is to be the compounding pharmacy of choice in the Southeastern United States providing the most innovative, high quality compounded medications and nutritional products to improve the health and well-being of all we serve.

Mission Statement

To continuously provide trustworthy, cutting edge resources dedicated to the development of specialized, custom preparations that sets the standard for quality and innovation in our industry.

- ✦ We will always provide and support an interactive network that encourages knowledgeable collaboration among health care professionals and consumers.
- ✦ We will aggressively explore any new business opportunities that might help our business partners and medical practitioners grow their practices and enhance patient care and the quality of life in our communities.

Value and Culture Statement

Our dedication to excellence by being PCAB accredited (an accreditation that less than 1% of the pharmacies in the US can claim), and Six Sigma certified (a certification that has been implemented by hospitals, banks and the electronic industries but not by any other pharmacy), substantiates our passion and commitment to quality.

Our systems and processes are committed to innovation, quality, safety and generating consistent, reliable, superior value to our customers.

Quality Management Commitment Statement

We have a commitment to achieve a 100% precision in the formulation, compounding and delivery of all our compounded, prescription medications, as well as providing therapeutic lines of vitamins and supplements. We continually verify and validate our processes, our quality management system and implement stringent quality control checks and measures at each stage of operation, based on a Six Sigma approach to management and our business processes. This commitment allows us to measure, correct and analyze our services so we can provide the customer with a truly unique customer experience.
